

## Here Come the Vikings!

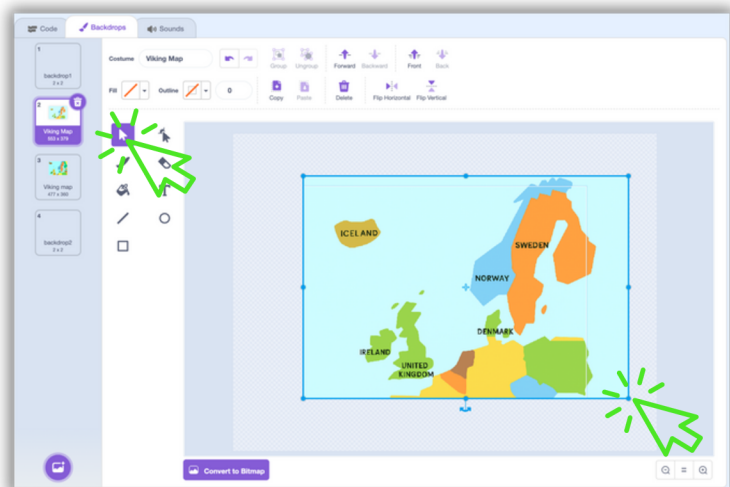

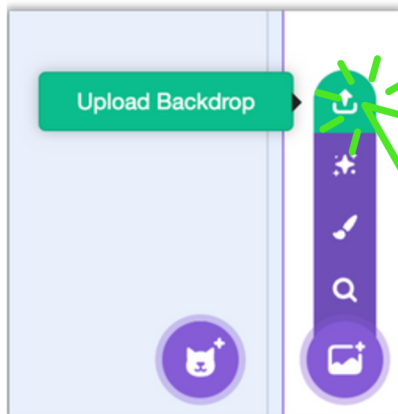

1. Use the Viking longship sprite and map backdrop in the starter project or create your own using the paint tools.

Starter project: <https://scratch.mit.edu/projects/1189885965/>

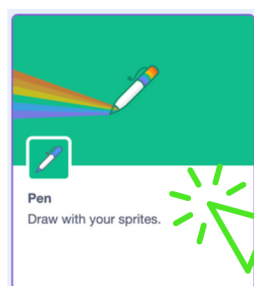

Use Ai to create a map image.

2. To upload your own backdrop, hover over the backdrops button and select upload. Adjust the size so it fits the stage area.

The stage area has a fixed size of 480 pixels wide by 360 pixels high. (Aspect ratio 4:3).

3. Click on the 'Add Extension' button (bottom left) and add the 'Pen' extension.

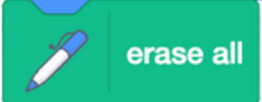

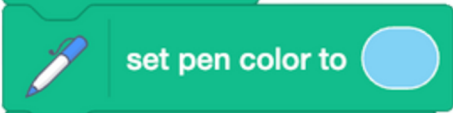

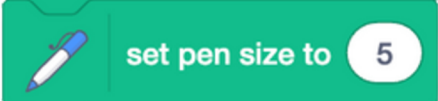

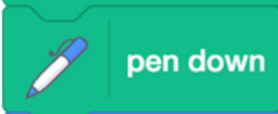

How about adding more map backdrops to show all the countries the Vikings invaded.

#### 4. Add the following code to your Viking longship sprite.

	When the green flag is clicked, the following code will run.
	This block sets the size of the sprite at the start.
	This block makes the sprite face left.
	This block makes sure the sprite stays upright.
	This block sets the start position of the sprite.
	This block erases any pen lines.
	This block sets the pen colour. I matched it to the colour of Norway on the map!
	This block sets the width of the pen line.
	This block enables the pen to start drawing.
	 <p>These are the positions your longship will glide to. You will need to adjust them according to your map.</p>
