

Catapult

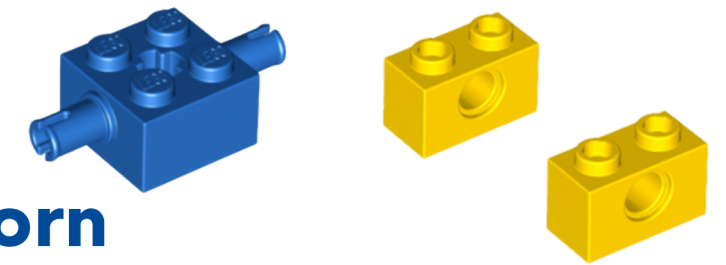

The Vikings didn't invent catapults. They probably learned about them from the Romans and then used them to attack castles and forts.

Construct a Lego catapult to launch small, light weight objects such as popcorn (or tiny balls of paper) to feed the dragons!

Use your catapult to feed your Lego dragons or turn it into a game.

What you need

- Baseboard
- Bricks
- Narrow plates
- Technic brick with pins and 2 x Technic bricks with holes
- Elastic band
- Paper balls or popcorn

Engineering Challenge

What is the furthest you can launch popcorn or a paper ball across the room?
