Ship A Frame
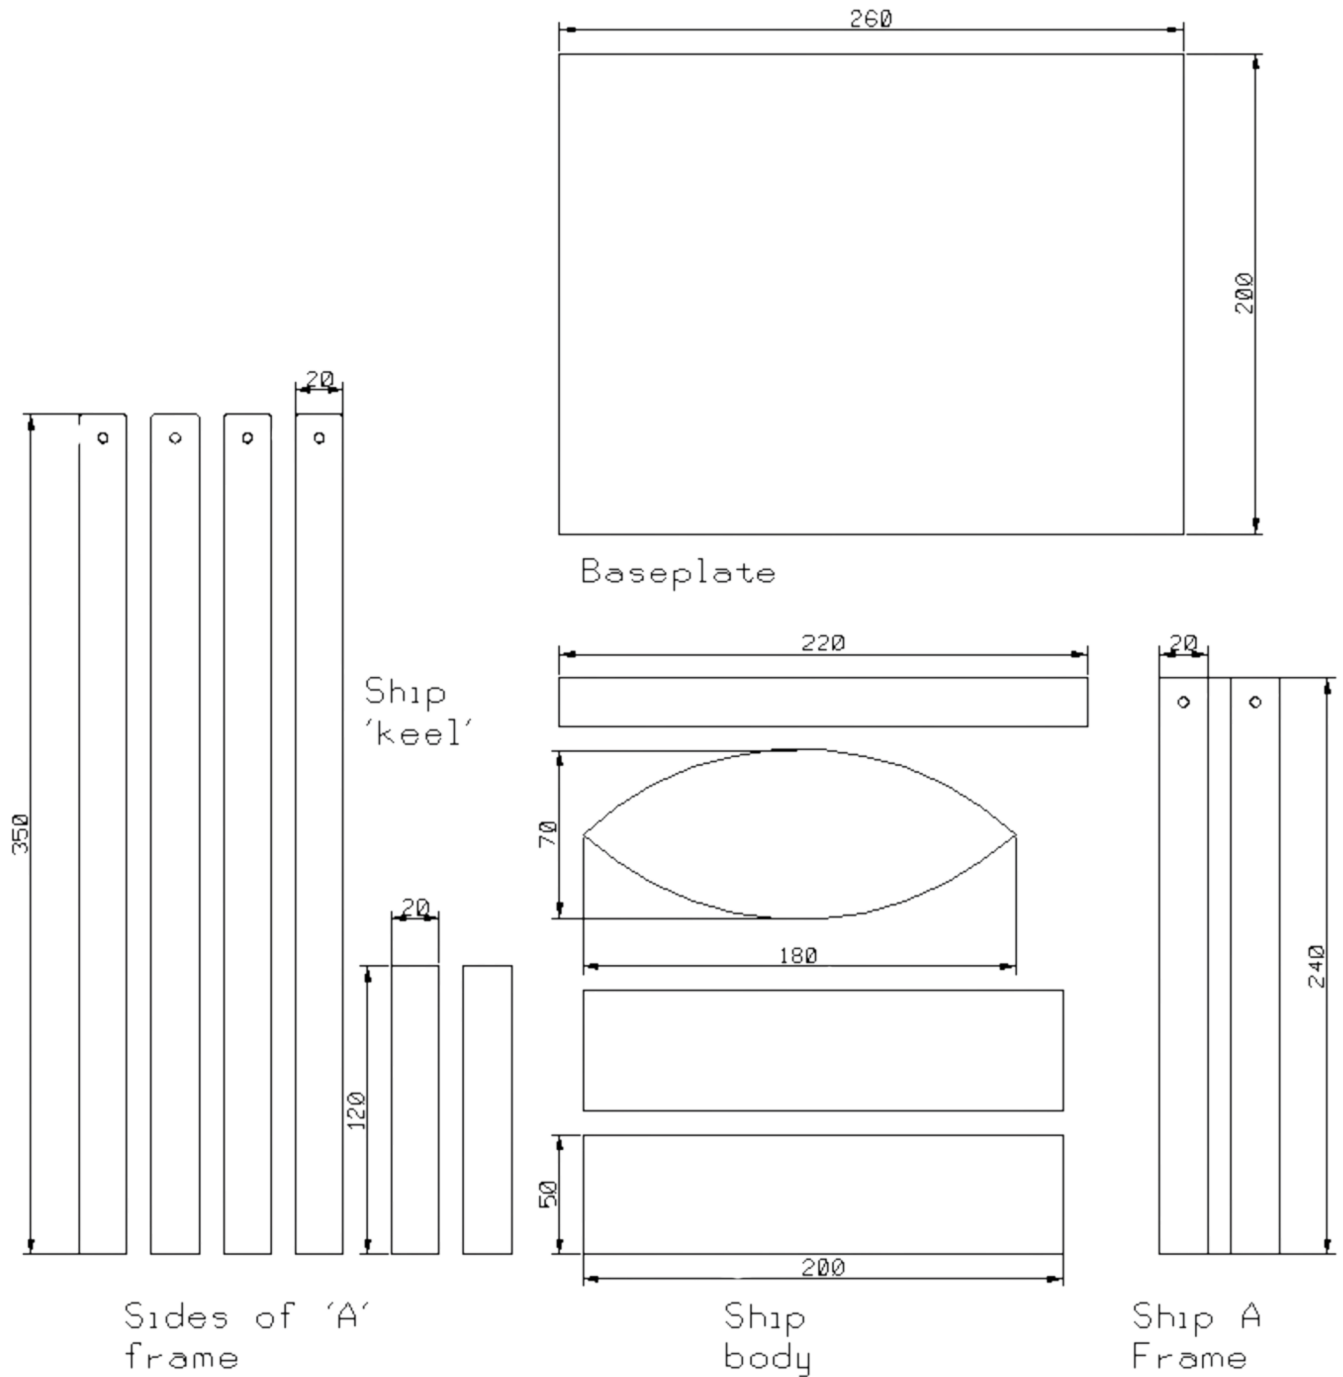

1. Draw the parts to scale on card and cut out.
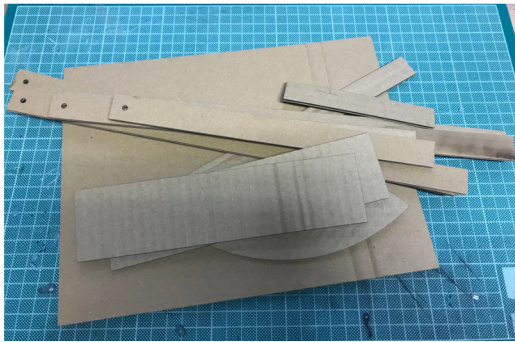

2. Line up the top of the A Frame and glue them together. You'll need 2 of these.

3. Cut the bottom edges straight, so they will stick to the base plate.

4. Glue the sides on to the hull.

5. Use a dowel rod or skewer to line up the holes.

6. Glue the keel on the bottom of the ship.
